

# Log Management & Analytics at a Glance

Sponsored by  
**logentries**  
BY RAPID7

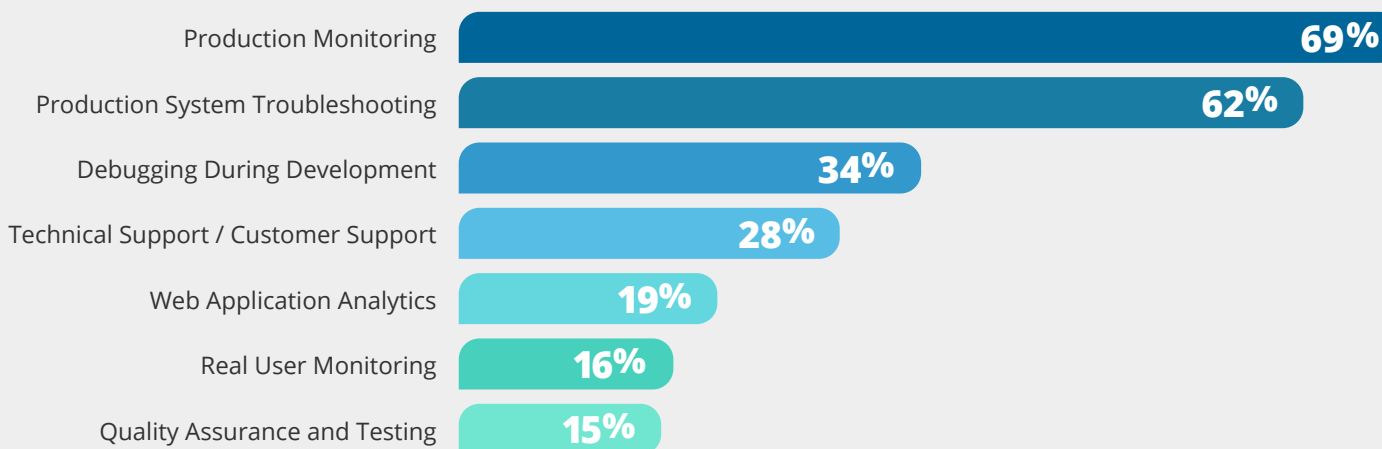

Logentries surveyed over 400 IT professionals about their views of log management and analytics. Here are some of the key highlights.

## About the Survey Takers

## Top Use Cases for Logging

As log management tools make it easier for non-technical teams to use log data, use cases like "Customer Support" are becoming more common. We asked respondents what their top use cases for log management included.

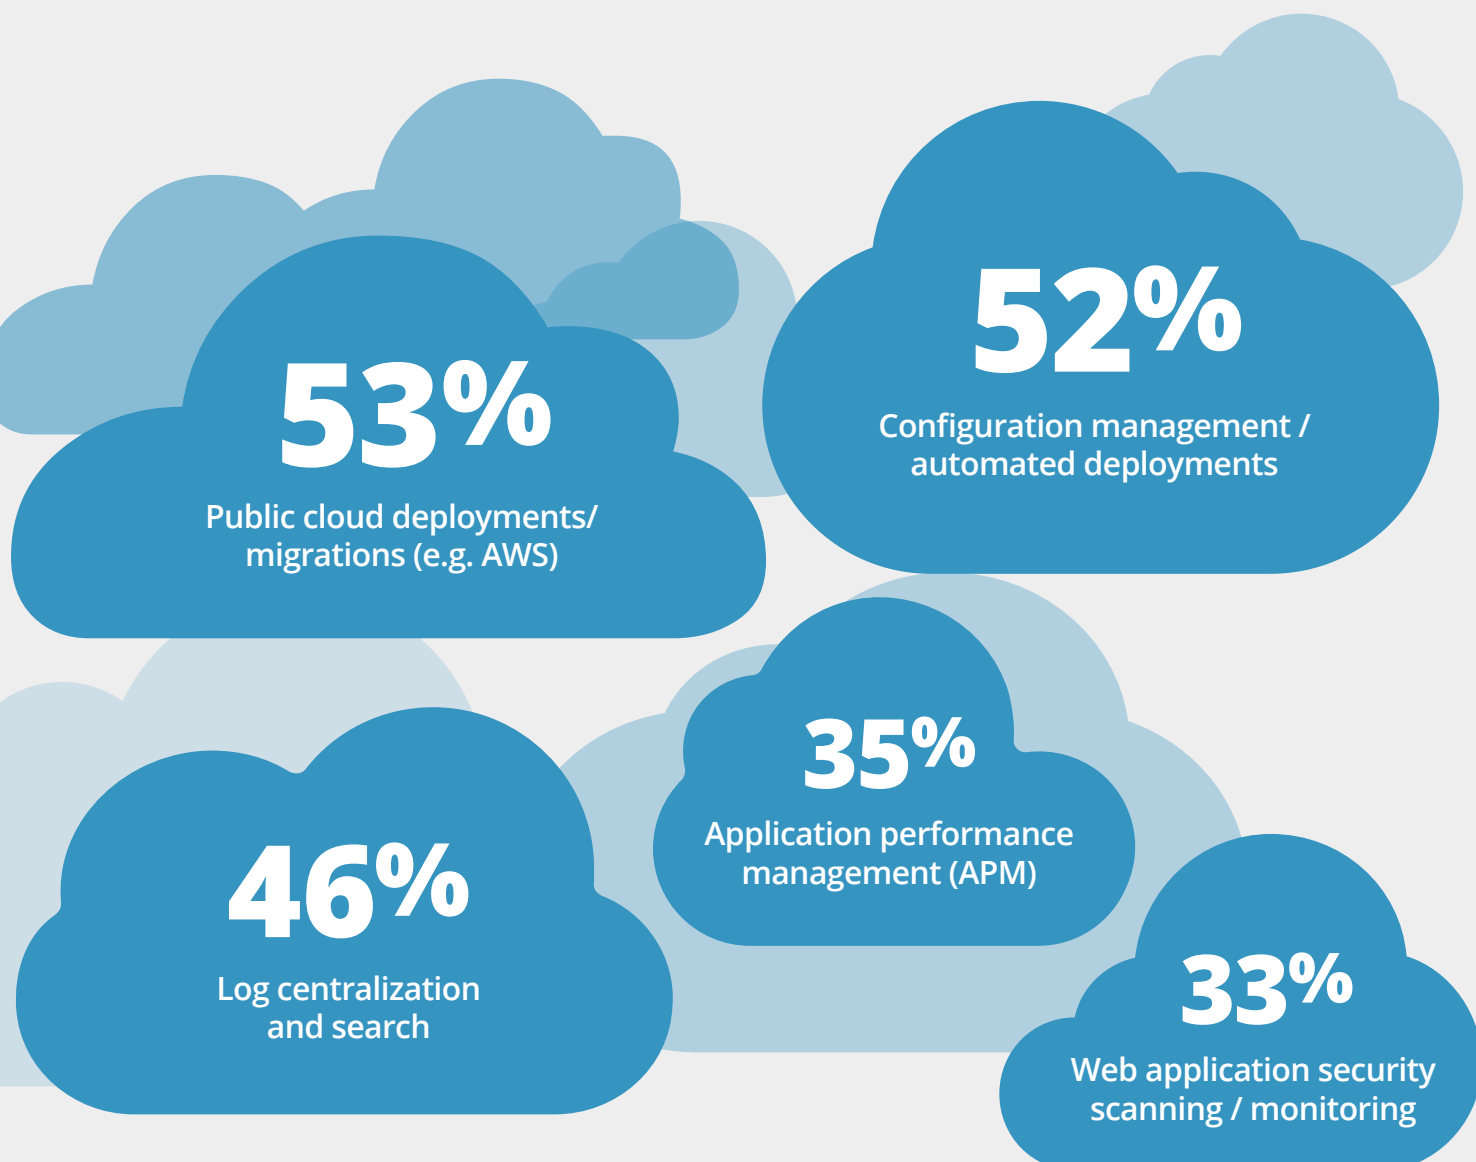

## On-Prem vs. Cloud vs. Containers

Infrastructure continues to evolve as more companies move to the cloud and containers begin to take their spot on the main stage. We asked respondents which environments they operate within.

## Where to Invest Tech Budgets in 2016

With increased focus on cloud and DevOps comes the need for further investment in automation. We asked respondents where they planned to invest their technology budgets in 2016.
